

Business Requirements Document (BRD)

Power BI Sales Performance Dashboard (2023–2024)

1. Introduction

This Business Requirements Document (BRD) defines the business objectives, functional requirements, data requirements, and reporting expectations for the Sales Performance Dashboard developed in Power BI. The dashboard is designed using sales datasets for the years 2023 and 2024 to help stakeholders monitor business performance and support data-driven decision-making.

2. Business Objective

The primary objective of this dashboard is to provide management and business users with a centralized analytical solution for monitoring sales performance, order trends, customer growth, product category contribution, and geographic sales distribution. The dashboard should enable comparison of actual performance against targets and provide insights for improving profitability and customer engagement.

3. Project Scope

- Analyze historical sales data for 2023 and 2024.
- Compare actual performance with target values across major KPIs.
- Provide monthly, quarterly, and category-wise sales insights.
- Identify top-performing customers and cities.
- Support interactive filtering and dashboard-based exploration in Power BI.

4. Stakeholders

Stakeholder	Role / Interest
Business Management	Track revenue, growth, and strategic performance
Sales Team	Monitor orders, customers, and sales targets
Marketing Team	Identify product and regional performance for campaigns
Data Analyst / BI Developer	Build, maintain, and enhance dashboard reporting

5. Business Requirements

- BR-1:** The dashboard must display overall business KPIs including Total Sales, Total Orders, Quantity Sold, and Total Customers.
- BR-2:** The dashboard must allow year-wise and quarter-wise comparison of performance.
- BR-3:** The dashboard must visualize monthly sales, orders, and quantity trends.
- BR-4:** The dashboard must provide product category analysis for sales and orders.
- BR-5:** The dashboard must display top customers by quantity sold and revenue contribution.
- BR-6:** The dashboard must provide geographic sales analysis by city.
- BR-7:** The dashboard must compare actual performance against target benchmarks.
- BR-8:** The dashboard must support interactive filtering for better analysis and decision-making.

6. Functional Requirements

Requirement ID	Functional Requirement
FR-1	Display KPI cards for Total Sales, Orders, Quantity Sold, and Customers
FR-2	Provide quarter selection filter (Q1, Q2, Q3, Q4)

FR-3	Show monthly line charts for sales, orders, and quantity trends
FR-4	Display category-wise sales bar chart and orders donut chart
FR-5	Provide city-wise sales map visualization
FR-6	Show top customer table with quantity sold and total sales
FR-7	Display gauges for target vs actual comparison
FR-8	Enable drill-down and slicer-based interaction across pages

7. Data Requirements

The dashboard uses two CSV datasets: Sales Data 2023.csv and Sales Data 2024.csv. These datasets should contain transaction-level sales records including order information, customer details, product category, quantity sold, sales amount, date, and city/location fields.

Required Data Fields:

- Order ID / Transaction ID
- Order Date / Month / Quarter / Year
- Customer ID
- Product Category
- Quantity Sold
- Sales Amount
- City / Location

8. KPI Definitions

KPI	Definition
Total Sales	Sum of sales amount across all transactions
Total Orders	Count of unique orders / transactions
Quantity Sold	Total quantity of products sold
Total Customers	Count of unique customers
Target Achievement	Comparison of current year actuals against previous year target

9. Assumptions and Constraints

- The source CSV data is complete, clean, and consistent across both years.
- Product categories and city names are standardized.
- The previous year (2023) values are used as baseline targets for 2024 comparison.
- The dashboard is intended for analytical and reporting purposes, not transactional updates.
- Users are expected to access the dashboard in Power BI Desktop or Power BI Service.

10. Success Criteria

The project will be considered successful if the dashboard:

- Accurately reflects the sales data from both CSV files.
- Enables users to analyze performance by time, category, customer, and city.
- Provides clear comparison between actual values and targets.
- Supports management in identifying trends, growth opportunities, and underperforming areas.

11. Conclusion

This BRD outlines the business and functional requirements for the Power BI Sales Performance Dashboard. The solution is intended to improve visibility into sales operations, help stakeholders track key business metrics, and

support better strategic decisions through interactive data visualization.
